Seizure Type/Name:

What Happens:

How Long It Lasts:

How Often:

Seizure Triggers:

☐ Missed Medicines

☐ Emotional Stress

☐ Alcohol/Drugs

☐ Menstrual Cycle

☐ Missing meals

☐ Lack of Sleep

☐ Physical Stress

☐ Flashing Lights

☐ Binges with high fever

☐ Response to specific food, or excess caffeine. Specify: _____

☐ Other: Specify: _____

DAILY TREATMENT PLAN

Seizure Medication(s)

Name	How Much	How Often/When

Additional Treatment/Care (i.e., diet, sleep, etc.)

CAUTION - STEP UP TREATMENT

Symptoms that signal a seizure may be coming on and additional treatment may be needed:

☐ Headache

☐ Staring Spells

☐ Confusion

☐ Dizziness

☐ Change in Vision/Hears

☐ Sudden Feeling of Fear or Anxiety

☐ Other: Specify: _____

Additional Treatment:

☐ Continue Daily Treatment Plan

☐ missed medicines, give prescribed dose from above ASAP.

☐ Do not give a double dose or give more closer than 6 hours apart.

Other Treatments/Care (i.e., sleep, dieting)

Make your HOME SAFER

✓ In the kitchen:

- Cook with a partner
- Use the microwave for most cooking
- Use non-breakable dishes
- Use caution with hot foods and liquids

✓ In the bathroom:

- Take a shower instead of a bath
- Install a rubber mat or non-slip strips on the tub or shower floor

SLEEP happens most often while the person is sleeping

Bathtub drowning is the most common cause of accidental death for people with epilepsy and seizures

✓ In the bedroom:

- Consider using a seizure alert monitor or sharing a room if a seizure happens
- Move your bed away from walls, night tables and other sharp or hard objects

✓ Around the house:

- Pad hard edges of tables and other furniture
- Keep walkways clear of cords, toys and power tools when you're alone
- Don't use kitchen appliances or power tools when you're alone

- Factor de riesgo definido
- Historia familiar de convulsiones febriles
- Edad (< 18 meses)
- Temperatura máxima
- Duración de la fiebre
- Factor de riesgo posible
- Historia familiar de epilepsia
- No es factor de riesgo
- Alteración del neurodesarrollo
- Convulsión febril compleja
 - > 1 Característica compleja
- Sexo y etnia

1981; 137 (2): 151-3. Neurodiagnostic assessment of the child with a simple febrile convulsion. 2008; 58 (549): 242-7. 1997; 151 (4): 371-8. Some people also respond well to the stimulation of the vague nerve, sensitive neurostimulation or deep cerebral stimulation, according to the May clinic. 2006; 97: 229-43. This publication provides detailed information on epilepsy and seizures, including common symptoms, diagnosis and available therapies. 11. 2003; 22 (3): 294-5. Comparison by a double-blind trial. Previctors of recurrent febrile seizures. Fever without fountain in children from 0 to 36 months of age. Typically, a convulsion will last between 30 seconds and two minutes. 38. Additional information sources are included. 27. Put the risk of seizures with pediatric vaccines in a clinical context. 2009; 50 Suppl 1: 2-6. If a convulsion lasts more than five minutes, it is considered a medical emergency, warns the May clinic. The symptoms of a convulsion depend on the part of the brain that is involved. McClelland S, Dube Cm, Yang J, Baram Tz. 1980; 280 (6211): 353-4. Dev. Protocol for the study and Luger of febrile crises precolp. 42. 2010; 42 (4): 277-9.
